

Wayne County Soil & Water Conservation District

It's time for our Forever Green Tree and Shrub Sale

Orders with Payment due by Friday, March 23rd, 2018

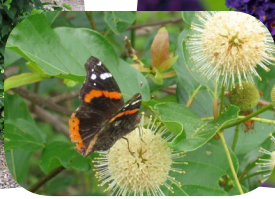

Each spring the 'District' sponsors a conservation tree and shrub sale for promotion of a healthy, clean landscape. Trees contribute to the environment by providing oxygen, improving air quality, climate amelioration, conserving water, preserving soil, and provide habitat for wildlife.

Plant a Tree to Improve Your Property!

You can also make a difference in your community by planting trees on your own property.

A properly-planted, mature shade tree on the south or west side of your house or business can save you up to 25% on your summer air conditioning bills and increase your property value by up to 20% with its beauty. That same tree will also help soak up stormwater in the neighborhood, and contribute habitat for local wildlife. If you plant a fruit or nut tree, you get food as an added bonus!

 2018!**

Garden Tips - Sun or Shade?

Full Sun: Full sun means 6 full hours of direct sunlight. Those six hours could be from 8 – 3 or 12 – 6; anytime during the day.

Partial Sun / Partial Shade: These two terms are often interchangeable to mean 3-6 hours of sunlight each day. Partial shade typically refers to morning and early afternoon sun, while a plant listed as partial sun, relief from the intense late afternoon sun is needed. Woodland plants and under plantings, even for many mosses prefer dappled sunlight more so than partial shade. **"Dapple Sun" (DS)** is partial sun as it makes it's way through the branches of a deciduous tree.

Full Shade: Full shade means less than 3 hours of direct sunlight each day, best if it's morning light. But even in the absence of direct sunlight, full shade can be a bright light. Plus, full shade likes a filtered sunlight the remainder of the day. Every plant needs some sun; even those that thrive in full shade.

2018 Fish Sale -Stock your ponds

Stocking Triploid Grass Carp to Control Aquatic Vegetation in New York Waters

Triploid Grass Carp: Grass Carp, which are sterile and incapable of producing viable young, are the only form of grass carp legal in NY due to concerns of the potential impact fertile grass carp could have on the ecosystem. Grass carp prefer submergent, tender plant species such as elodea, coontail, fanwort, curly leaf pondweed and watermilfoil. They will not control emergent plants such as cattail, bulrush or floating plant species such as water lily.

Please include a copy of the approved DEC permit with order form.

A DEC permit is required before you can buy and stock grass carp in your pond. The permit form is available on our website at <http://waynecountyNYsoilandwater.org/>, or you can call our office and we can mail a copy. The permit should be completed and sent to DEC at least three weeks before our sale to ensure you receive your permit before our deadline.

Species	Price	Quantity	Total
Fathead Minnows 2"-3"	\$20.00/ 1 lb (Appx. 150)		
Largemouth Bass 3"-5"	\$30.00 / 10

* We accept MasterCard, Visa, American Express and Discover credit cards.

To place an order with a credit card, please call our office at 315-946-7200

Checks payable to: Wayne County SWCD Mail order to: 7312 Rt-31, Lyons, NY 14489

Fish food now available: Feeding the fish in your pond from April to October can dramatically increase their growth. Bass, perch, catfish and minnows are all fed fish food at the hatchery and will readily take it once stocked in your pond. Wild bass already present in your pond may have a difficult time adapting to fish food. Other species will usually figure it out, except for crappie and walleye, which prefer minnows and natural feed. We are offering 10 pound bags, but larger quantities are available through us.

What containers & water should I use? We recommend a large cooler or clean garbage can with lid filled with at least 15-20 gallons of water from your pond. Do not use chlorinated water to transport your fish. Bring at least 20 gallons of pond water for every 6 Grass Carp, 30 Catfish, 500 Minnows, 100 Bass or 100 Perch for a travel time of 30-45 minutes. Please bring a cover for the containers, so the water does not splash around and the fish do not jump or splash out. A garbage bag with a tie in the container works.

Wayne County Agriculture Environmental Management

Agricultural Environmental Management

Wayne County Agriculture Environmental Management offers continued stewardship and environmental management planning for the economic future of your operation. There are new programs in the last few years that address several areas of every farmer's concerns within their operation. For further details on each of these programs, please contact the Wayne District Office at 315.946.7200 or Ron Thorn – Ron@WayneNYswcd.org or Ian Priestley – Ian@WayneNYswcd.org.

Agricultural Non-Point Sources Abatement and Control program (Ag NPS) – still going on! Entering into the 24th round of funding.

This funding source is a cost share program that matches New York State funding to local landowner/farm match to implement projects that address water quality associated with farming practices. There are over 20 systems that can be implemented to assist with environmental and economic daily management.

Climate Resiliency Farming Program (CRF) – is in its third round of funding. The funding for this program is also a cost share program that matches New York State funding to local landowner's match. This program is currently accepting applications and due February 16, 2018. The CRF program addresses farms with building adaptive management practices for dealing with increased water quantity issues, erosion due to those water quality issues and tolerance to the fluctuation high and low precipitation years. Practices such as irrigation, stormwater management, manure cover and flares addressing clean water exclusion and manage soil health through conservation cover and tillage management.

Recently installed in Rose NY, a clean water exclusion, manure storage cover and methane flare.

New York State Grown & Certified (G&C) – is a marketing program that targets people seeking source certified and environmentally sound food. This program is offered different each year and sometimes address operational improvements that include environmental improvements as well as economic ones. Example, Production Waste Disposal; Agri-Chemical Mixing Facilities; Irrigation Systems & Well Development; Energy reduction through green energy.

Soil Health Management through Eco System Based Management – Soil health is a base to any prosperous farm. Currently, Wayne SWCD has soil sample funding that can offset the cost per sample to about \$4.00 farmer cost & we will even pull the samples.

Tillage Management & Buffer Development – Rent the District's No-Til Drill to improve pasture seedings, forage lots, small grain plantings and buffer development. \$50.00 delivery/setup fee & \$15.00/acre.

WAYNE COUNTY

SOIL & WATER
CONSERVATION DISTRICT

Thank you!

Sponsor the Wayne County Envirothon

The Envirothon is a competition designed to give high school students the opportunity to learn about environmental issues and natural resources by conducting tests in the field. This year's **Wayne County Envirothon is April 17th, 2018** at the Montezuma Audubon Center.

The Envirothon often becomes a lifestyle for students and goes beyond competitions and school club meetings—it encourages students to be actively engaged in the environment around them at all times. Many students move onto careers in the conservation and environmental fields.

The District greatly appreciates the support we receive from area businesses who make donations toward the Envirothon youth conservation program. This support assists in the purchase of Envirothon T-shirts, educational prizes and awards for the event. Area sponsors have included Wegmans, Arney's Marina, Captain Jack's, Clyde Hardware, Walmart Newark, Dobbins Drugs, Lyons National Bank, Lyons Veterinary Clinic, Finger Lake Aquaculture, Seneca Foods Foundation, Featherly's Garage, and Marshall Farms, Inc.

If you or your business are interested in sponsorship please contact our offices at 315-946-7200

WAYNE COUNTY

SOIL & WATER
CONSERVATION DISTRICT

PLEASE READ: All plants are bare root stock. Consult our online catalog for a detailed description of a bare root plant. Stock may be used for wildlife habitat, erosion control, reforestation, windbreaks, landscaping, Christmas trees, etc. All trees and shrubs sold are to be used for these conservation practices. Trees and shrubs are sold with the understanding that they will not be removed from the planted site for resale with the roots attached. Orders are filled on a first-come, first-serve basis. The District reserves the right to refund payment on items if they should become unavailable. The District will NOT be responsible for the success or failure of plantings. Plant size may be subject to change depending on the vendors' availability. **Plants with *** indicate limited quantities.**
